SMTL Dressings Datacard

Product Name:	**SILICONE N-A**
Classification Name:	**Dressing, Knitted Viscose, Silicone Impregnated.**
Manufacturer:	**Johnson & Johnson Medical Ltd**

Description

Silicone N-A consists of a knitted fabric sheet made from continuous monofilament viscose yarns on to which has been polymerised a silicone coating.

The dressing is designed to act as a low adherence primary wound contact layer that may be easily removed from the surface of a granulating wound[*** linked gw-00 ***] without causing pain or trauma. The silicone coating does not occlude the pores of the fabric but allows free drainage of exudate from the wound thus preventing tissue maceration.

Indications

Silicone N-A dressing is indicated for use on ulcerative and other granulating wounds[*** linked gw-00 ***] i.e., leg ulcers, pressure sores[*** linked ul-de-00 ***], burns, cuts and abrasions[*** linked me-ab-00 ***].

Contra-Indications

No contra-indications to the use of Silicone N-A have been reported.

Method of use

Silicone N-A dressing should be placed lightly on the wound using an aseptic technique. An absorbent secondary dressing is generally then applied, kept in place with surgical tape or a bandage as appropriate.

Frequency of Change

The secondary dressing can be changed as often as required, leaving the Silicone N-A in position. Frequent changes of Silicone NA are not required

Presentation

The dressing is presented in a peel pouch sterilised by irradiation.

Storage

The dressing should be stored in a cool place. The shelf life is three years.

Sizes

9.5 cm × 9.5 cm
